How to buy

Need help with installation? Find a Professional near you

If you're not sure how to install your thermostat, contact one of the Honeywell approved professionals in your area.

Find a PRO

It's time to prepare your home for winter

Check your system

Have a professional look at your heating system before you fire it up for the winter. Make sure you check the furnace and venting system, as well as any carbon monoxide detectors.

Be winter ready

Clean out those gutters

To avoid unwanted floods from rain and melting snow, make sure your gutters aren't clogged with leaves and other debris. Check out the roof while you're up there too.

Find out more

Test the air conditioning

Before the big chill arrives, clear the unit of any debris, then use a breathable cover to protect it from wind, rain, snow...and those pesky autumn leaves.

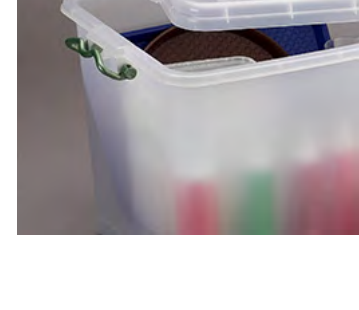

How to winterize your system

Make sure you're insulated

A frozen pipe can cause huge damage if it bursts, so ensure everything is well padded. Insulate exposed pipes with tubular sleeves, especially in unheated areas like the basement or attic.

More about insulation

Get the basement ready

You've done the spring clean, now it's time for an autumn clear-up. Tidy away the summer equipment and check for any small leaks that could become big problems.

Avoid trouble below

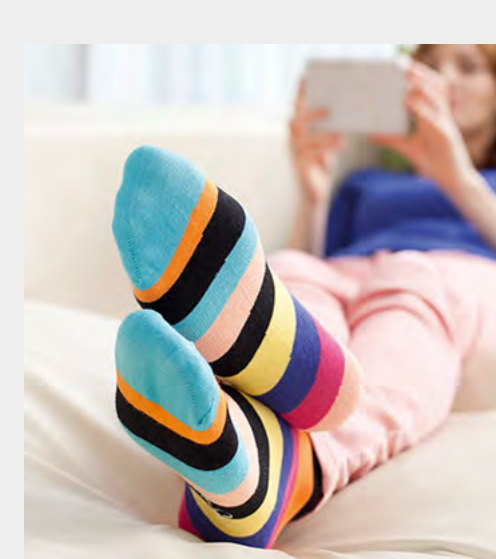

Check that chimney

Make sure your chimney is clear of any nests, then ensure it's drawing up the fire and smoke properly. Inspect the brick around the fireplace and repair any cracks and gaps.

More about chimneys

How to improve your air quality this winter

Take comfort in a fresh home

Our wide range of filters, purifiers, humidifiers and dehumidifiers, will help improve your home's air throughout the winter.
